

Databricks Enablement — Home Credit Philippines

Updated at: 2026-09-16

The first and only full-day workshop is confirmed for 22 September 2026; this is not workshop 1 of 3 or an open scheduling window.

22 September 2026 (Tuesday) · Full day · Face-to-face at Ore, 14F

Workshop scenario

Hands-on exercises use **Unicorn Finance Philippines**, a fictional consumer lender taking over an inherited Databricks lakehouse. All workshop records are synthetic and do not represent Home Credit production data or systems.

Pre-requisites

- Basic familiarity with SQL and Python
 - Sign up for [Databricks Free Edition](#) to explore the platform hands-on (you can use your personal email)
 - Create a free [Databricks Academy](#) account using your **corporate email**
 - Complete the "**Databricks Fundamentals**" self-paced path (~1 hour)
-

Morning

9:00 AM – 9:30 AM: Introduction to Databricks

- Understanding the Databricks Data Intelligence Platform and how it fits together
- Navigating the workspace: notebooks, SQL editor, Catalog Explorer, and dashboards
- Governing all data and AI assets from one place with Unity Catalog
- Choosing the right compute: clusters, SQL warehouses, and serverless

Getting started: [Databricks overview & tutorials](#) · [Free Databricks training](#)

9:45 AM – 11:15 AM: Data Analysis in Databricks (1.5h)

- Choosing the right query engine for your workload: Lakehouse, Lakehouse//RT, and Lakebase
- Exploring and transforming data with Python and SQL in notebooks
- Creating governed, shareable reports with AI/BI Dashboards
- Integrating with external BI tools like Tableau and Power BI

Recommended pre-reading: [Get Started with SQL Analytics and BI on Databricks](#)

11:15 AM – 12:15 PM: Generative AI in Databricks (1h)

- Accelerating development and analytics for technical users with Genie Code
- Supercharging coding assistants with Unity Gateway and AI Toolkit
- Introduction to Genie and Genie One
- Demo: Ask natural-language questions about the analysis with Genie

Recommended pre-reading: [Genie overview](#) · [AI Gateway overview](#)

12:15 PM – 1:15 PM: Lunch Break

Afternoon

1:20 PM – 3:20 PM: Data Engineering in Databricks (2h)

- Scheduling and orchestrating workflows with Databricks Jobs (DAGs, parameterization, monitoring, alerts)
- Building data pipelines declaratively with Lakeflow Pipelines: Streaming Tables, Materialized Views, and the medallion architecture
- Building pipelines visually with the low-code Lakeflow Designer
- Enforcing data quality with Expectations (WARN / DROP ROW / FAIL)
- Ingesting from SaaS sources with Lakeflow Connect (managed connectors)
- Monitoring pipeline health and observability

Recommended pre-reading: [Get Started with Databricks for Data Engineering](#)

3:20 PM – 3:50 PM: Governance with Unity Catalog (30 min)

- Governing data and AI assets from a single control plane with Unity Catalog

- Controlling who can access what with privileges, ABAC, row filters, and column masks
- Discovering and documenting data assets with Catalog Explorer
- Tracing data flow automatically with table-level and column-level lineage
- Identifying sensitive data automatically with data classification and tagging

Recommended pre-reading: [Get Started with Data Governance on Databricks](#)

4 PM – 5 PM: Introduction to Machine Learning in Databricks (1h)

- Tracking and comparing experiments with MLflow (autologging, parameters, metrics, artifacts)
- Managing model lifecycle with the Model Registry in Unity Catalog (versioning, aliases, lineage)
- Engineering and serving features at low latency with the Feature Store and Online Feature Stores
- Deploying models as REST endpoints with Model Serving (serverless autoscaling, CPU/GPU)
- Running inference at scale with batch and SQL-native AI functions
- Monitoring model performance with data profiling, drift detection, and inference tables

Recommended pre-reading: [Get Started with Databricks for Machine Learning](#)
